CAREER SUMMARY

Dedicated and adaptable software engineer with a passion for continuous learning and effective problem-solving. Committed to developing scalable solutions and integrating new technologies while collaborating in team environments to achieve project goals.

EDUCATION

Bachelor of Technology (Honors) in Computer Science(CGPA:9.23) 2020-2024
Gayatri Vidya Parshid College of Engineering.

Board of Intermediate Education(MPC) (CGPA:9.94) (JEE Percentile:99.6) 2018 - 2020
Narayana Junior College.

SKILLS

Programming :	Java, Python, C++,C#, Data Structures
Web Development:	HTML, CSS, PHP, Django, Node.js, Express, React
Database and Version Control:	Database Management Systems (DBMS), Git, GitHub, Bitbucket, MySQL, Elasticsearch
Technology and Tools:	Machine Learning, Natural Language Processing (NLP), Transformers, Generative AI, PyJWT, HuggingFace Embeddings, VectorDB.

EXPERIENCE

TAXMANN TECHNOLOGIES July 2024 – Present
Associate Software Engineer

- Developed and maintained backend APIs for legal and tax software products, automating database management tasks to optimize data retrieval.
- Integrated Elasticsearch for efficient search and data indexing in the platform.
- Retrieved and validated in-app purchase data from Android and iOS platforms, and managed subscription plans with automated data storage for Plus and Premium plans.
- Built and optimized responsive UI components using React, enabling dynamic interactions and seamless user experience across the platform.

Python Developer Intern January 2024 - June 2024

- Developed and maintained backend APIs using the Django framework.
- Implemented the Retrieval-Augmented Generation (RAG) approach on large datasets utilizing various open-source models and VectorDB.
- Converted C# codebases into Python-based APIs tailored to project requirements.

QUANTUM AI GLOBAL August 2023 - October 2023
Machine Learning Engineer Intern

- Developed a customized Applicant Tracking System.
- Used various pre-defined models in transformers for various tasks(Obrizum/all-mpnet-base-v2, T5 small)
- Working with NLP and utilized Fast API for efficient deployment of the model.

PROJECTS

YOUTUBE TRANSCRIPT SUMMARIZER: Using gettranscript API, extracted data from the youtube URL and summarized its contents using T5 model. The summarized content will be displayed in various languages along with voice assistance

ATS USING GENERATIVE AI: The ATS is a software tool which is customized to automate the collection, screening and management of the job applications, making it easier for recruiters to identify the qualified candidates and also it automates the further interview process by using conversational AI

Model: Sentence transformers(Obrizum/all-mpnet-base-v2), summarizer(T5 small).

ESTIMATING TOTAL EARNINGS IN A RETAIL CHAIN USING ML: Using a decision tree algorithm, we developed an ml model which predicts the total earnings of a company in a retail chain. And we also developed a website, which provides access to the model, displaying the total earnings based on user inputs.

Aasishare (Accident Alert Application): Accident alert app make use of html, css, php, bootstrap. It sends an emergency alerts to designated team members when an accident occurs for providing timely assistance. In turn it enhances safety and quick response in critical situations.

CERTIFICATIONS

- Git and Github by coursera.
- The fundamentals of machine learning form udacity.
- Java basic course from Infosys spring board.

ACHIEVEMENTS

- successfully developed and currently managing the GVPCENSS website
- As an Event Management Lead in NSS,I've Organised and actively participated in over 20+ events.And I have taken my roles and responsibilities as a Student volunteer in Rotaract.
- As an active coder, I have successfully solved over 300+ problems in the LeetCode
- Finalist in one Hackathons out of 3 Hackathons attended
